Art Unit: 1761

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on November 17, 2006 has been entered.

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-17, 19-25, 29-31, 33, 34, 38-40, 42-54, 57 and 58 are rejected under 35 U.S.C. 103(a) as being unpatentable over either Howarth patent in view of Hilgren et al. Applicant is referred to paragraph nos. 6-8, Paper No. 030606.

4. Applicant's arguments filed October 19, 2006 have been fully considered but they are not persuasive. Applicant's contention that Hilgren et al leads away from applicant's invention by discouraging use of chlorine-based biocides is without merit. Hilgren et al merely discourages using excessive chlorination, and the Howarth patents do not use chlorinated biocides in excess. Thus, the primary and secondary references are properly combinable. Applicant's remarks regarding the use of different biocide concentrations for the interior and exterior of the poultry carcasses are not convincing as set forth in the third sentence of paragraph no. 8, Paper No. 082106 and since

Art Unit: 1761

applicant has not provided any factual evidence of unexpected results for this concentration difference.
